KAM, Leading Supplier of DCC Software, Announces the Release of Loco CE® Software for Wireless Networks

KAM, the leading supplier of DCC software for the model railroad industry, is releasing patented Loco CE® software for wireless networks. Loco CE wireless software runs on your Windows PDA, and allows you full control over the model railroad layout. Loco CE software was designed for hobbyists by hobbyists, and provides a complete solution for a replacement throttle on the command station.

Loco CE software features a simple to use interface with a visual throttle, and KAM's patented one step Smart Decoder® programming technology. The Smart Decoder Technology provides a simple operation for programming a locomotive on your layout.

Loco CE may be purchased from the KAM web site or major dealers and OEMs. Loco CE is also bundled into leading manufacturers' DCC systems; for example, Set LI* from Lenz Elektronik, GmbH. (see www.lenz.com for more information) .

Loco CE software is the first product for the model railroader to use the latest computer wireless

technology. The implementation uses a patented XML- data/control interface designed specifically for model railroad layouts.

Loco CE is shipped with additional software components to make it a complete solution. The popular Engine Commander® Release 3 and Train Server® software are shipped with the product. There are two versions of Engine Commander included with the product: a version for your local system and a second copy for a wireless laptop or tablet PC.

Loco CE software has a suggested retail price of \$59 and is included in Lenz Set Li configuration (Lenz offers the Set Li product through their dealer channel). Loco CE software is compatible with Windows 2000 and Windows XP. Loco CE requires PDA versions PC2002, PC2003 or later. Loco CE software uses the Train Server to handle the traffic to/from the command station. Supported command stations include; Lenz XpressNet*, Digitrax's LocoNet*, EasyDcc*, Nce's Powerhouse* Pro, and LGB Multi Train System* 55060 interface. Other interfaces are under development. Loco CE supported features vary on command station; see the KAM web site for the latest information. Loco CE and Train Server are available for integration with third party software developers and other OEMs' products.

More information is available from KAM Industries at www.kamind.com, sales@kamind.com or call us at 503-291-1221. A Dealer program is available.
