KAM Industries Announces Availability of Decoder Commander® DCC Programming Software

Hillsboro, OR. May 4, 2005 - KAM Industries announced today the availability of Decoder Commander Software for programming advanced DCC mobile decoders. This software will be available from KAM's web site and selected dealers in the United States. Decoder Commander Suite will retail for \$59, and will include Engine Commander Release 4 and Train Server Release 3. Decoder Commander Suite will ship June 30, 2005.

Decoder Commander is a user-friendly, network-enabled program that features a 3rd generation user interface design. Decoder

Commander works with all supported command stations using KAM's Train Server software. The software allows you to program all configuration variables using a simple visual interface, and clone locomotives.

"Decoder Commander is a great leap forward for users" stated Matt Katzer, president of KAM Industries. "Our beta users have been testing Decoder Commander for over 18 months, as we examined ways to simplify the programming process for the modeler. Our goal was to introduce a tool that is best of class to allow users to spend more time on the model railroad and less on programming."

All KAM software runs on Windows XP and later operating systems from Microsoft. KAM Industries is dedicated to bringing the best hobbyist experience to the computerized model railroad layout. More information on KAM's software and technologies is available on KAM Industries' web site at www.kamind.com

Decoder Commander and Train Server are registered Trademarks of KAM Industries.
