**KAM Industries Announces Availability of Engine Commander®
Release 4 for Computer Control**

Hillsboro, OR. May 4, 2005 - KAM Industries announced today the availability of Engine Commander Release 4 software for operation control of DCC model railroads. This software will be available from KAM's web site and selected dealers in the United States. Engine Commander will retail for \$39, and will ship June 30, 2005.

Engine Commander Release 4 offers many new features above and beyond the current release. Engine Commander 4 provides users with a visual interface designed to work with the next generation of tablet PC's and desktop systems. Engine Commander

Release 4 is the only software application that features an integrated multi-user, multi-command station interface allowing users complete control over the railroad.

"As model railroad layouts become more complex, the challenge has been to add new capabilities to the software while reducing the complexity. Our goal is to allow modelers more time to focus on their railroad", stated Matt Katzer, president of KAM industries. Engine Commander Release 4 supports all capabilities of Engine Commander 3 and adds fast clock, consist, momentum functions and a new visual interface for users.

All KAM software runs on Windows XP and later operating systems from Microsoft. KAM Industries is dedicated to bringing the best hobbyist experience to the computerized model railroad layout. More information on KAM's software and technologies is available on KAM Industries' web site at www.kamind.com

Engine Commander and Train Server are registered Trademarks of KAM Industries.
