**KAM Industries Announces Availability of Loco CE® Release 2 for
Computer Control**

Hillsboro, OR. July 3, 2005 - KAM Industries announced today the availability of Loco CE Release 2 software for wireless operation of DCC model railroads. This software will be available from KAM's web site and selected dealers in the United States. Loco CE suite will retail for \$59, and will ship July 7, 2005.

Loco CE Release 2 offers many new features above and beyond the current release. Loco CE 2 provides users with a visual interface designed to work with the next generation of Windows PDA and Smart phone hand held devices. Loco CE Release 2 is the

only software application that features an integrated multi-user, multi-command station interface allowing users complete control over the railroad.

"As model railroad layouts become more complex, the challenge has been to add new capabilities to wireless handhelds while reducing the complexity. Loco CE allows modelers to have a full featured wireless device to control the railroad with an easy to use visual interface", stated Matt Katzer, president of KAM industries. Loco CE Release 2 supports all capabilities of Loco CE Release 1 and adds fast clock, consist, momentary functions, accessory turnout plates, and occupancy signals.

All KAM software runs on Windows XP and later operating systems from Microsoft. Loco CE runs on Windows 2003 Second Edition mobile devices (PDA and smart phones) and early PC2002, PC2003 PDA's in low resolution mode.

KAM Industries is dedicated to bringing the best hobbyist experience to the computerized model railroad layout. More information on KAM's software and technologies is available on KAM Industries' web site at www.kamind.com
